

ERIC MICHAEL O. ALVAREZ

Senior Android Developer

Cabuyao, Laguna 4025, PH • +63 917 535 6794 • eric.alvarez292@gmail.com • [LinkedIn](#) • [Portfolio](#)

PROFESSIONAL SUMMARY

- Senior Android Engineer with 10+ years architecting and delivering production applications end-to-end, with deep expertise across entertainment and airline/travel platforms.
- Strong foundation in Kotlin, Java, Jetpack Compose, and Clean Architecture/MVVM/MVI, with hands-on full-stack contributions to backend (Node.js/Express) and frontend (Angular) layers across multiple platforms.
- Technical range extends to cloud, security, and DevOps practices - CI/CD pipelines, code quality tooling, secrets management, and identity/auth integrations.
- Proven track record modernizing legacy platforms into faster, more maintainable systems, with a pragmatic, AI-assisted workflow (GitHub Copilot, Claude Code) to ship efficiently without cutting corners.
- Experienced in Agile methodologies, collaborating effectively with cross-functional teams and contributing to system design, feature implementation, testing, and production support.

TECHNICAL SKILLS

Mobile	Android, Java, Kotlin, XML, Jetpack Compose, Coroutines/Flow, ExoPlayer
Frontend	Angular, TypeScript, Bootstrap
Backend	Node.js, Express.js, RESTful APIs
Databases	PostgreSQL, SQLite, Room Database, Firebase Firestore, MongoDB
Data & Messaging	RabbitMQ, ETL Pipelines, Google BigQuery, Adobe Analytics
Cloud & DevOps	AWS, Firebase Services, Azure DevOps, GitLab, GitHub Actions, CI/CD Pipelines
Architecture	Clean Architecture, MVP, MVVM, MVI, Modular SDK Design
Quality & Security	SonarQube, TDD, Unit & UI Testing, OAuth2/JWT, Auth0 (by Okta), Secrets Management
AI Assisted Engineering	GitHub Copilot, Claude Code, Spec-Driven Development
Practices	Agile/Scrum, Cross-Functional Collaboration, AI-Assisted Engineering

PROFESSIONAL EXPERIENCE

Cognizant

Senior Software Engineer - Alaska Airlines Project

Oct 2023 – Present

- Delivered Android-side features supporting the integration of Alaska Airlines and Hawaiian Airlines brands within the Passenger Service System (PSS), ensuring a seamless guest experience during the merger.
- Designed and modernized the end-to-end check-in flow, including backend-driven eligibility checks (bags, seats, boarding passes). Re-architected core components using Kotlin, Jetpack Compose, coroutines, and Clean Architecture (MVVM/MVI) to ensure portability, maintainability, and alignment with modern Android standards - accelerating development cycles across multiple client platforms.
- Designed and launched the Same Day Return feature, modernizing check-in workflows by enabling guests to check in for return flights prior to outbound departure - driving higher adoption rates and faster boarding times.
- Developed international compliance features such as passport detail submission and lap infant declarations, digitalizing regulatory workflows for improved accuracy and efficiency.
- Integrated Auth0 identity provider into the Android platform as part of a cross-functional team, enhancing authentication, security, and seamless user access.
- Strengthened security posture by configuring secrets management across build types and environments in CI/CD pipelines. Enforced automated coverage gates via Azure DevOps and SonarQube, and drove compliance through structured code reviews to ensure release reliability.
- Built dynamic seat promotion tiles, baggage management modules, and real-time engagement features using Airship Live Activities, streamlining guest operations and generating measurable ancillary revenue growth.

- Advanced team efficiency and modernization initiatives through GitHub Copilot adoption, streamlining development cycles, reinforcing coding standards, and accelerating delivery of guest-facing features.

Tech Stack: *Android (Java, Kotlin, XML, Jetpack Compose, Coroutines), (MVVM, MVI, Modular Design), SonarQube, Optimizely, Auth0, Airship, GitHub, Azure DevOps, CI/CD*

Migo Entertainment Inc. | PH & ID

Senior Full Stack Developer

Jul 2021 – Oct 2023

- Led the development of the in-house Agency Tool mobile app, an incentive program platform that boosted company sales by 25% and generated income for 3,000+ agents - solely developed the Android app (Kotlin) and contributed full-stack to the web layer, including backend (Node.js/Express, PostgreSQL) and frontend (Angular/TypeScript, Bootstrap).
- Digitalized the retailer partner contract signing and management process, enabling the RTM team to increase field-signed contracts by 15%. Solely owned the mobile app (Android/Kotlin), contributing to backend services (Node.js/Express, PostgreSQL).
- Partnered with product managers to gather requirements, propose technical and UX solutions, and deliver accurate project timelines.
- Conducted UAT to validate UI/UX alignment with end-user expectations, reducing post-release defects and improving feature adoption.
- Monitored application stability, performed root cause analysis, and implemented long-term performance improvements.

Tech Stack: *Android (Kotlin, XML), (Angular, TypeScript, Bootstrap), (Node.js/Express, PostgreSQL, RabbitMQ, ETL), GitLab, GitHub Actions, CI/CD*

Senior Android Developer

May 2019 – Jul 2021

- Built and maintained the in-house Ticketing System, reducing operational costs by USD 1,000/month - solely developed the Android app (Kotlin) and contributed full-stack to the web layer, including backend (Node.js/Express, Firebase) and frontend (Angular/TypeScript, Bootstrap).
- Built and maintained a messaging backend service serving as a unified communication platform across multiple internal applications, improving collaboration and reliability.
- Implemented CI/CD pipelines for mobile and web deployments, reducing release cycles and increasing deployment efficiency.

Tech Stack: *Android (Kotlin, XML), (Angular, TypeScript, Bootstrap), (Node.js/Express, PostgreSQL), Firebase (Hosting, Functions, Firestore, Auth, Storage, BigQuery, Data Studio), GitLab, GitHub Actions, CI/CD*

Android Developer

Jun 2014 – May 2019

- Re-architected and migrated core application features (catalog browsing, content download, and video playback) from Java to Kotlin, restructuring under Clean Architecture and MVVM - including modernizing video playback with Coroutines and ExoPlayer, improving performance by 12%, stability by 9%, and long-term maintainability through greater modularity and testability.
- Developed and maintained the Offline Daily Rewards feature, increasing user retention by 20% and driving higher engagement.
- Created feature prototypes to accelerate design validation and stakeholder alignment.
- Built and maintained a POS application providing a visual interface for content download progress, slot management, and sales transactions.

Tech Stack: *Android (Java, Kotlin, XML, Coroutines, ExoPlayer), Bitbucket, SonarQube, CI/CD*

Software Quality Assurance Engineer

Mar 2014 – Jun 2014

- Ensured software quality by writing detailed test cases and executing manual testing across multiple Android devices.
- Authored Android automation test scripts to improve coverage, reduce manual effort, and accelerate release cycles.

Tech Stack: *Android, Java, Robotium, Bitbucket*

Fixed Asset Custodian / Inventory Clerk

Nov 2013– Mar 2014

- Managed and safeguarded all incoming and outgoing company assets, ensuring accurate documentation, proper handling, and up-to-date inventory records.
- Maintained organized asset tracking systems to support operational accountability and audit readiness.

EDUCATION

Trimex Colleges

Bachelor of Science in Computer Science (Cybersecurity) - 2023
